SUMMARY

Highly motivated individual with strong leadership and management skills, autodidact software developer.

EXPERIENCE

Frontend Developer

Kal-quote

📅 03/2021 - Present

A startup company that specializes in providing a solution to the problem of communication and management between suppliers and customers

- A single frontend developer in a team of three
- Built a SaaS application
- Standardized all output with a new, responsive, mobile-first approach and strategy.
- As a sole front developer, I created the frontend myself while thinking and self-learning about the best options
- Optimized pages using SSR to reduce loading time
- Creating code for future rewriting

PROJECTS

Replicaz

🔗 https://replicaz.vercel.app/

As a personal project, I created a website that functions as a community for replica shoes and clothes.
The website allows users to create posts and discussions around specific topics related to replica items.
Users can also learn how to order replica items by themselves direct from China.

- TypeScript, React, NextJS, Material UI, Tailwind CSS, MongoDB , NodeJS, express, mongoose.
- Used context API for state management
- Used ReactQuery for caching and infinty scroll
- Used NextJS for better SEO and SSR

Weather Website

🔗 https://weather-site-gray.vercel.app/

- In my free time, I developed a weather website that provides users with up-to-date weather information for any location.
- To achieve this, I integrated the website with weather API and used various techniques to ensure the website's performance and user experience were optimized. The website also includes various features such as a search function, detailed weather forecasts.
- This project allowed me to enhance my skills in web development, APIs integration, and user interface design, while also demonstrating my ability to work independently and manage a project from start to finish.

LANGUAGES

English   Proficient   **hebrew**   Native

SKILLS

Programming Languages
